## Welcome

Welcome to Angus Production Inc.'s (API's) coverage of the 2011 Range Beef Cow Symposium, which is scheduled to be Nov. 29-Dec. 1 at the Mitchell Event Center, Mitchell, Neb. The event center is located at the [Scotts Bluff County Fairgrounds](#).

The Range Beef Cow Symposium is sponsored by the Cooperative Extension Service and animal science departments of the University of Wyoming, South Dakota State University, Colorado State University and the University of Nebraska. The biennial symposium has a reputation of being an excellent educational program, offering practical production management information since the first symposium in Chadron, Neb., in 1969.

The event rotates between Colorado, western Nebraska, western South Dakota and Wyoming. In the Western states, the symposium regularly attracts business booth vendors for the three-day event.

... at the Gering Civic Center, Gering, Neb., are ... symposium. This is a time for attendees to have ... considerable discussion with the speakers and an opportunity to ask specific questions. The majority of symposium speakers on Tuesday and Wednesday will be present in the evening

Site sponsored by:

Visit the sites in API's topic library ...

The topic sites in our [library](#) offer gateways to information on body condition scoring, beef cow efficiency, drought, feeding & feedstuffs and more. [Click here.](#)

API event sites ...

- [Beef Improvement Federation](#)
- [Applied Reproductive Strategies in Beef Cattle](#)

Symposium registration, including three days and two lunches, is \$90 if paid prior to Nov. 20.

# Overview

- Fascinating
- Popular with those high on the industry
- Best kept technology secret

# Study of birth records in UK and Europe

- Women - under-nutrition (400 – 600 cal/d) first half of gestation and adequate subsequently
- Babies - normal birth weight, proportionally longer & thinner
- As adults – increased incidence of diabetes, obesity and cardiovascular disease

# The Barker Hypothesis

- Maternal nutrition impacts the fetus's future growth, development, and risk of disease after birth and into adulthood. (Barker, 1992)

# Principles

- Critical periods of fetal development
- Permanent effects that change susceptibility to disease
- Involves structural changes to organs
- Placenta plays key role
- Fetus attempts to compensate
- Fetal cellular mechanisms differ from adult
- Passed on, but does not involve changes in genes (epigenetics)
- Different effects for male and female

From *Life in the Womb: The Origin of Health and Disease* by Peter W. Nathanielsz, M.D., Ph.D.

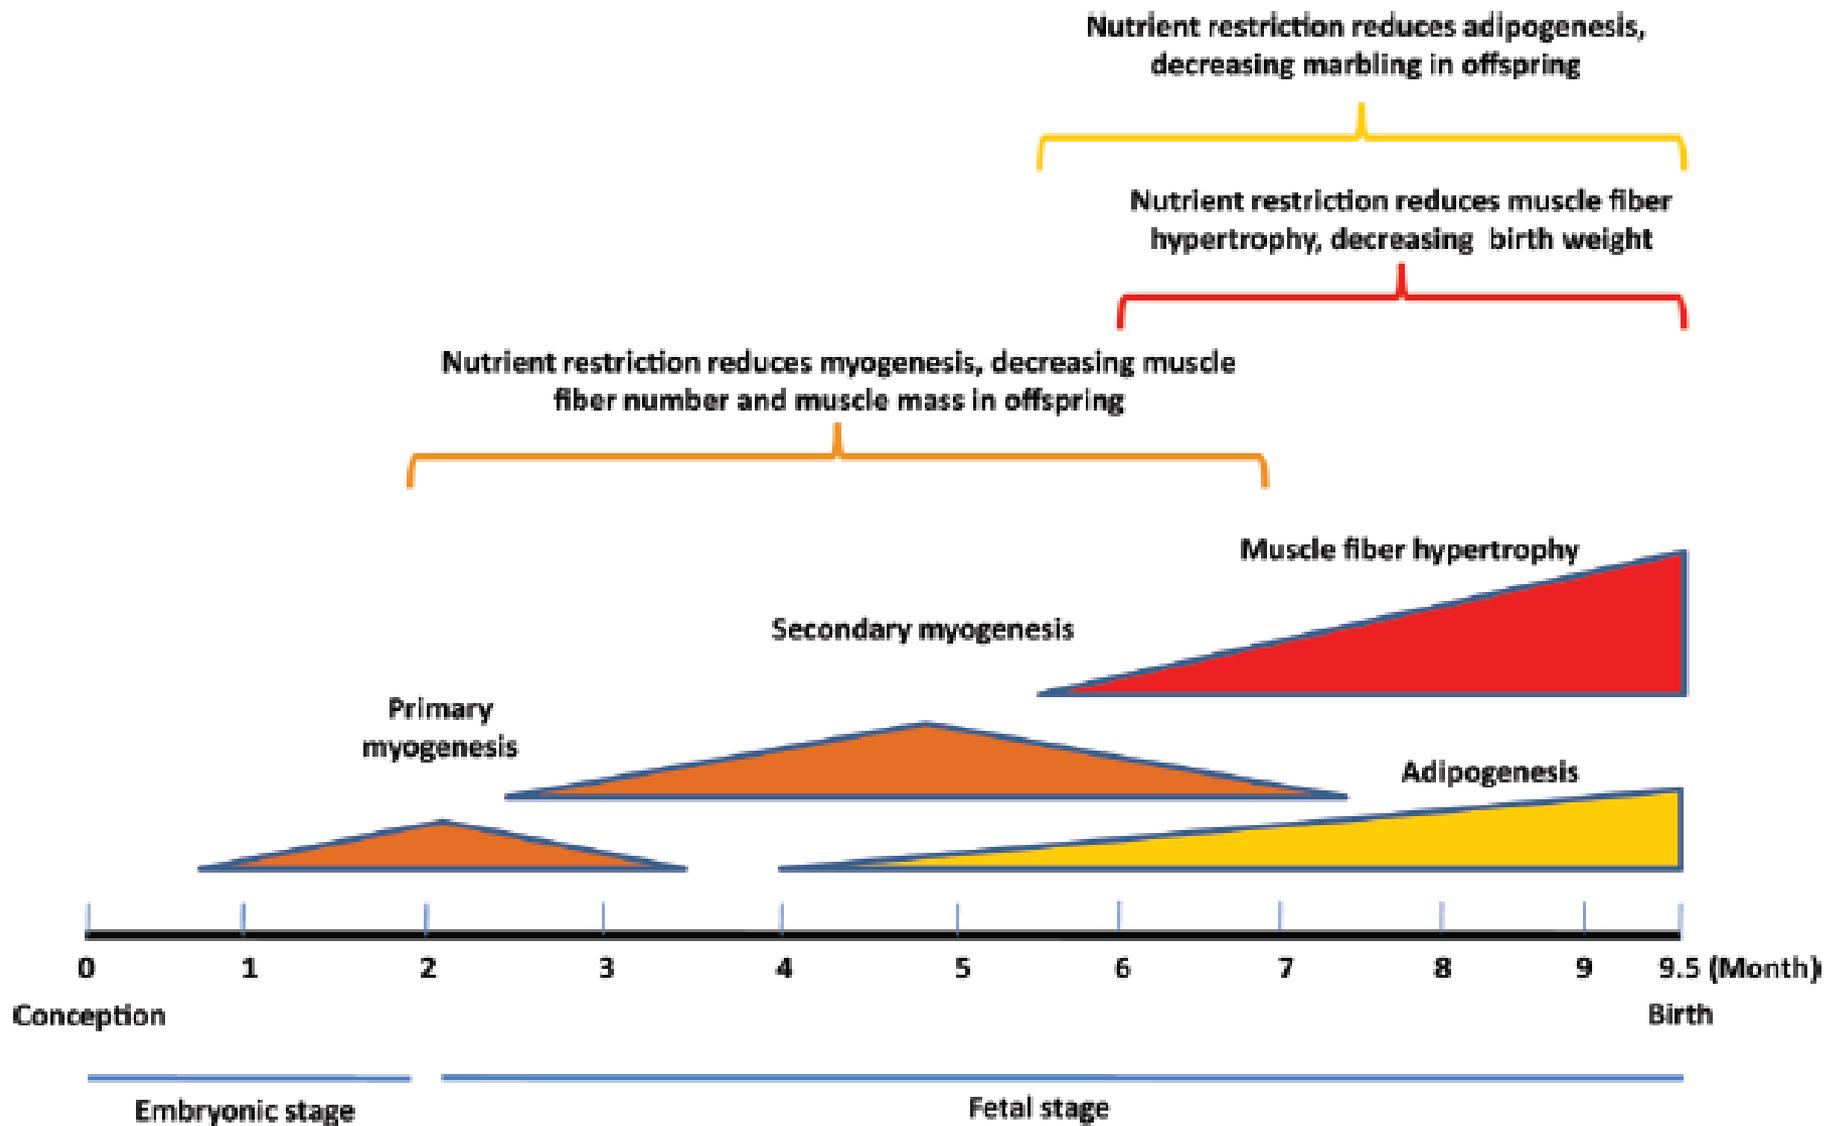

Figure 1. Effects of maternal nutrition on bovine fetal skeletal muscle development. The dates are estimated mainly based on data from studies in sheep, rodents, and humans and represent the progression through the various developmental stages. Nutrient restriction during midgestation reduces muscle fiber numbers, whereas restriction during late gestation reduces both muscle fiber sizes and the formation of intramuscular adipocytes.

No supplement

Protein Suppl  
(last trimester)

↑ ADG, HCW  
↑ marbling score, %  
choice

Larson et al, 2009

## Steer Progeny

Native pasture

Improved pasture  
d 120 -180 of gestation

↑ Wn wt, ADG, HCW

Underwood et al. 2010

No supplement

Protein Suppl  
(last trimester)

# Heifer Progeny

No difference

- Age at puberty
- Cycling before

Martin et al, 2007

↑ Weight - adj 205 day,  
prebreeding, yearling preg check  
time and as 2 yr olds

↑ Final Pregnancy rate  
↑ Calved 1<sup>st</sup> 3 wks

No diff  
Hfr wt at prebreeding  
Calf production or  
heifer calf rebreeding

↓ Age at puberty  
Trend higher PR

Funston et al, 2010

100 vs 65 % Energy last 1/3  
Earlier puberty  
Corah et al, 1975

No supplement

Protein Suppl  
(last trimester)

## Animal Health

Fewer steers treated  
Mullinkiks et al 2008  
Larson et al 2009

No difference  
Treated prior to wean or feedlot, Stalker et al 2006  
Respiratory treats prior to weaning, Larson et al 2009

↑ Live calves weaned  
Stalker et al 2006

100 vs 65 % Energy last 1/3  
↑ Morbidity and mortality  
Corah et al, 1975

# Thrifty phenotype as a result of under-nourished fetus

- Increased appetite
- Prone to insulin resistance and obesity
- Ewes – consumed 50% more feed, no improvement feed efficiency,
- Put on more fat, internal and subcutaneously

# Obese Ewes

F1 generation

F2 generation

Fed to  
normal  
weight

Maint. Diet during preg

Daughters –  
Insulin resistant

↑ Glucose & insulin concentrations

↑ Internal fat

Campus farm flock

Nomadic range flock  
(no supplement)

Under-nourished ewes early to  
mid-gestation

- Fetal growth retarded
- Pancreas altered
- Heart enlarged

Mid gestation

- Normal fetal growth
- Placenta more efficient

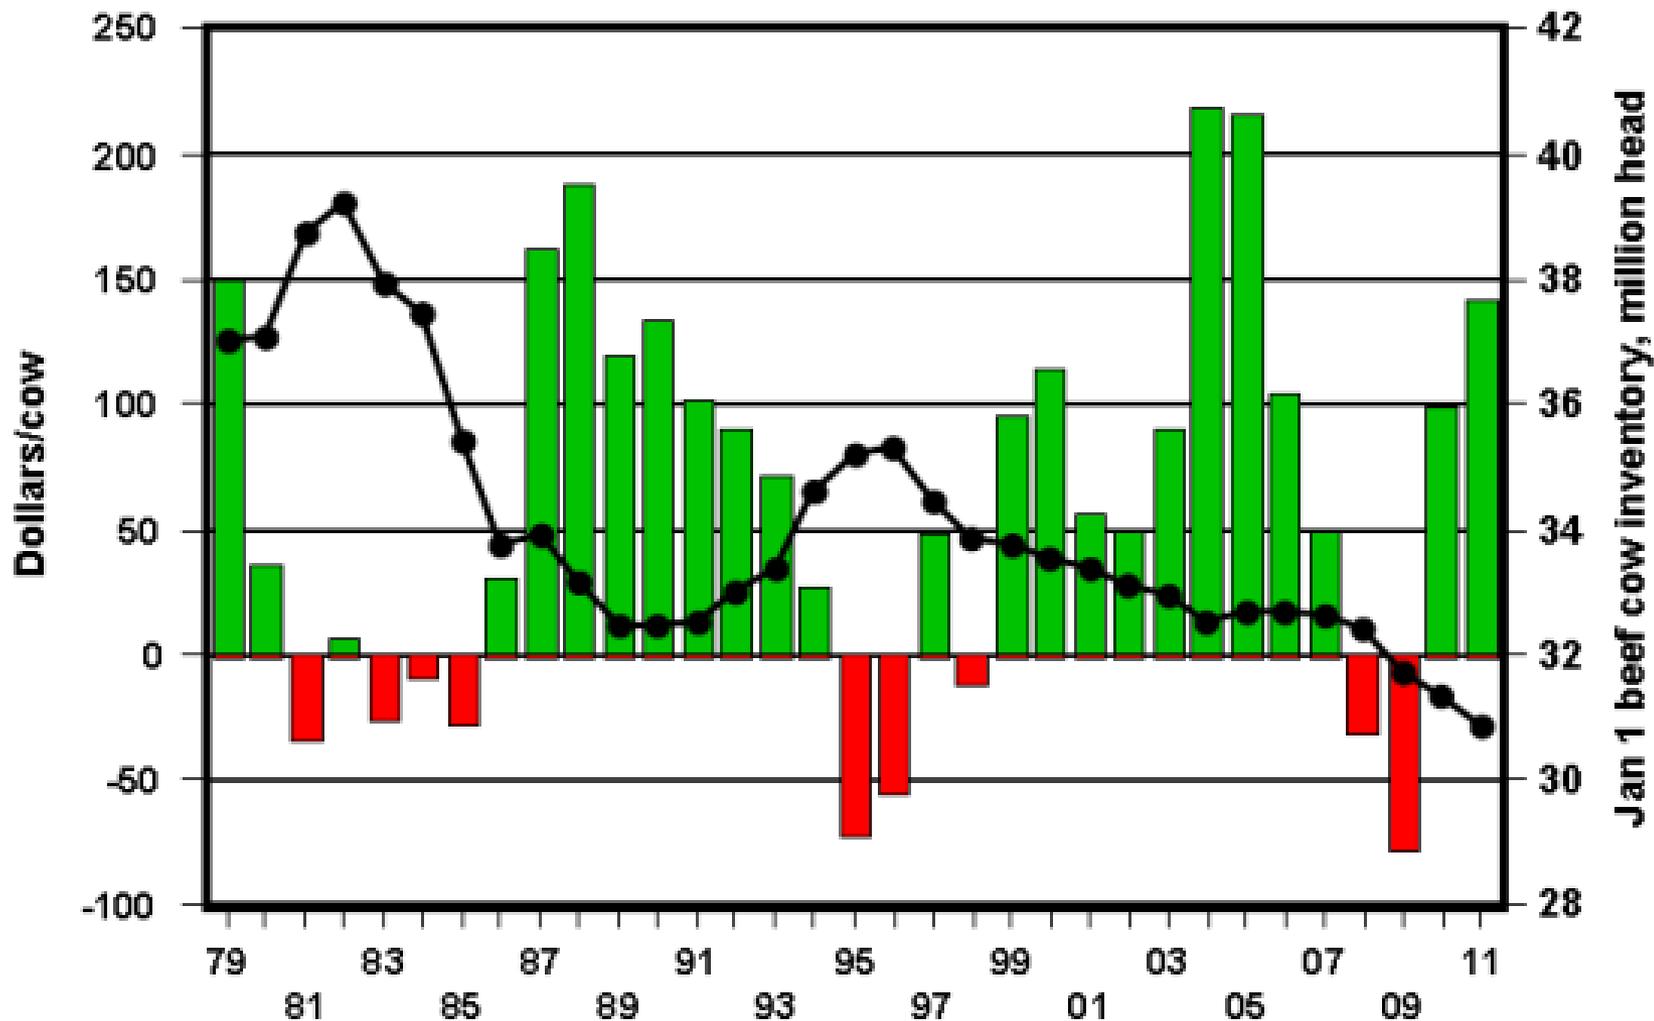

**Adults**

- ↑ appetite
- Insulin resistant
- Hypertensive

Normal – adapted to  
low inputs

# Shifts in heifer development thinking

## Traditional

- Emphasis on puberty
- Target weight 60 – 65%
- Feedlot system
- Cheap grain, relatively easy to make them fat

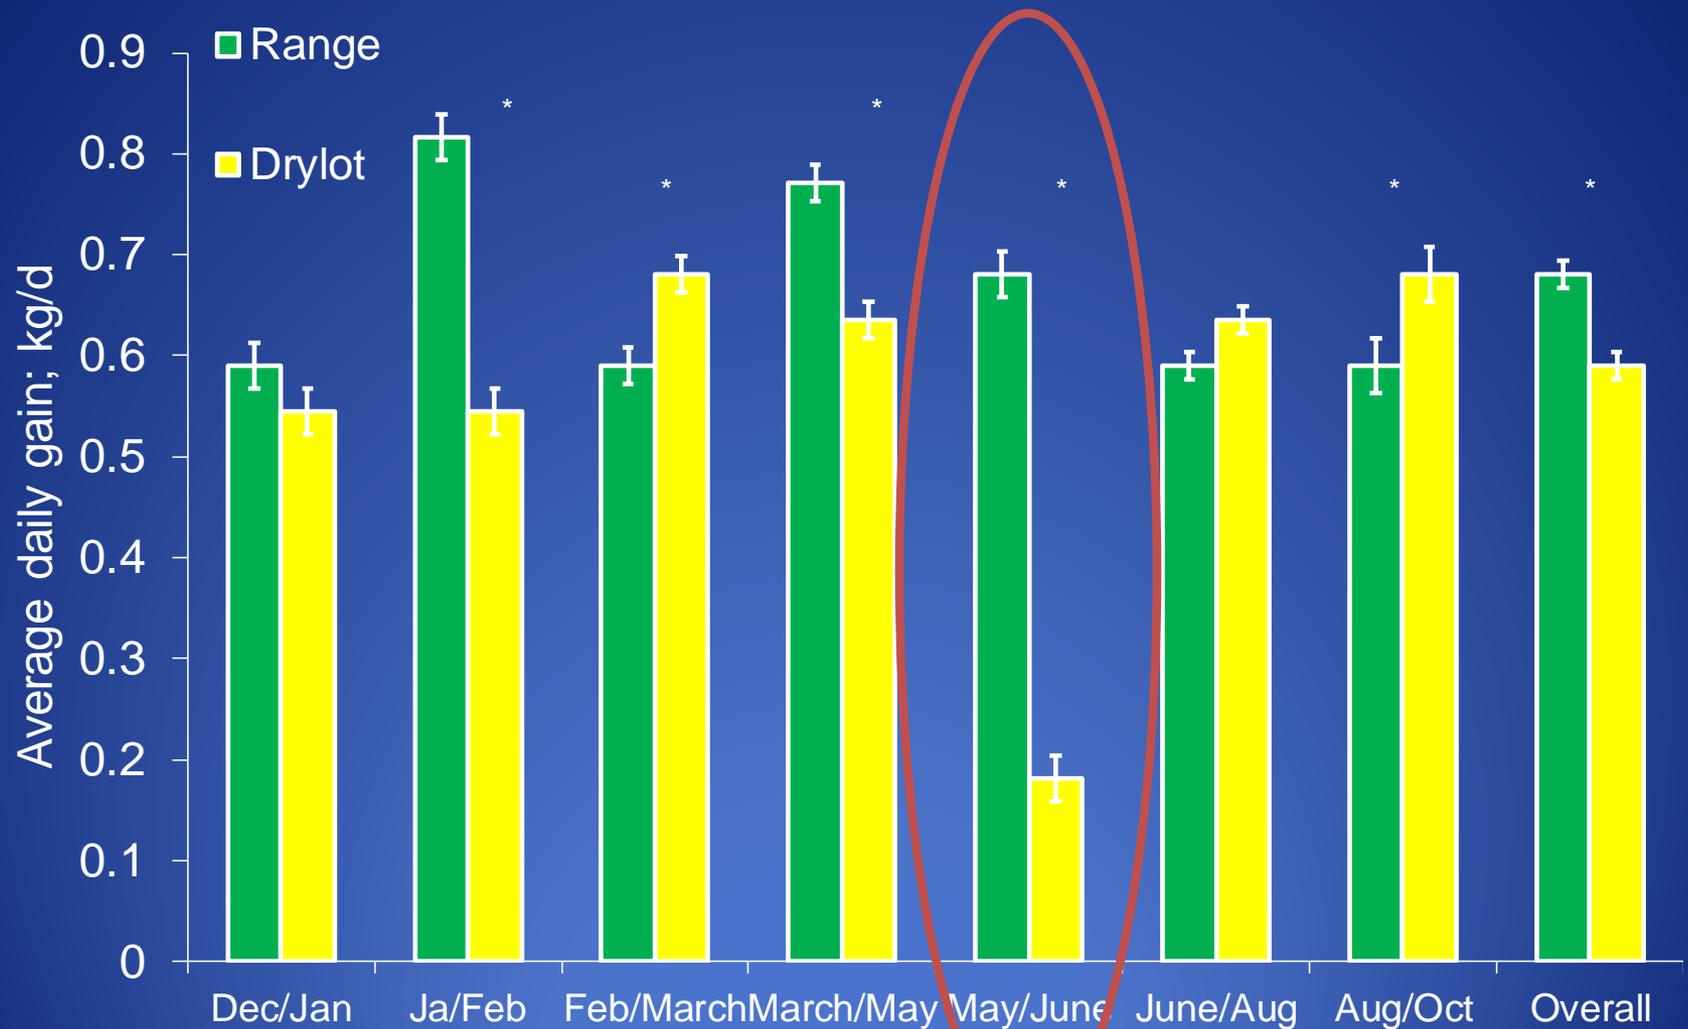

## Nontraditional

- Puberty less of an issue  
- heifers becoming pregnant on the cow
- Low cost, low gain  
lower target weight
- Open yearling heifers profitable

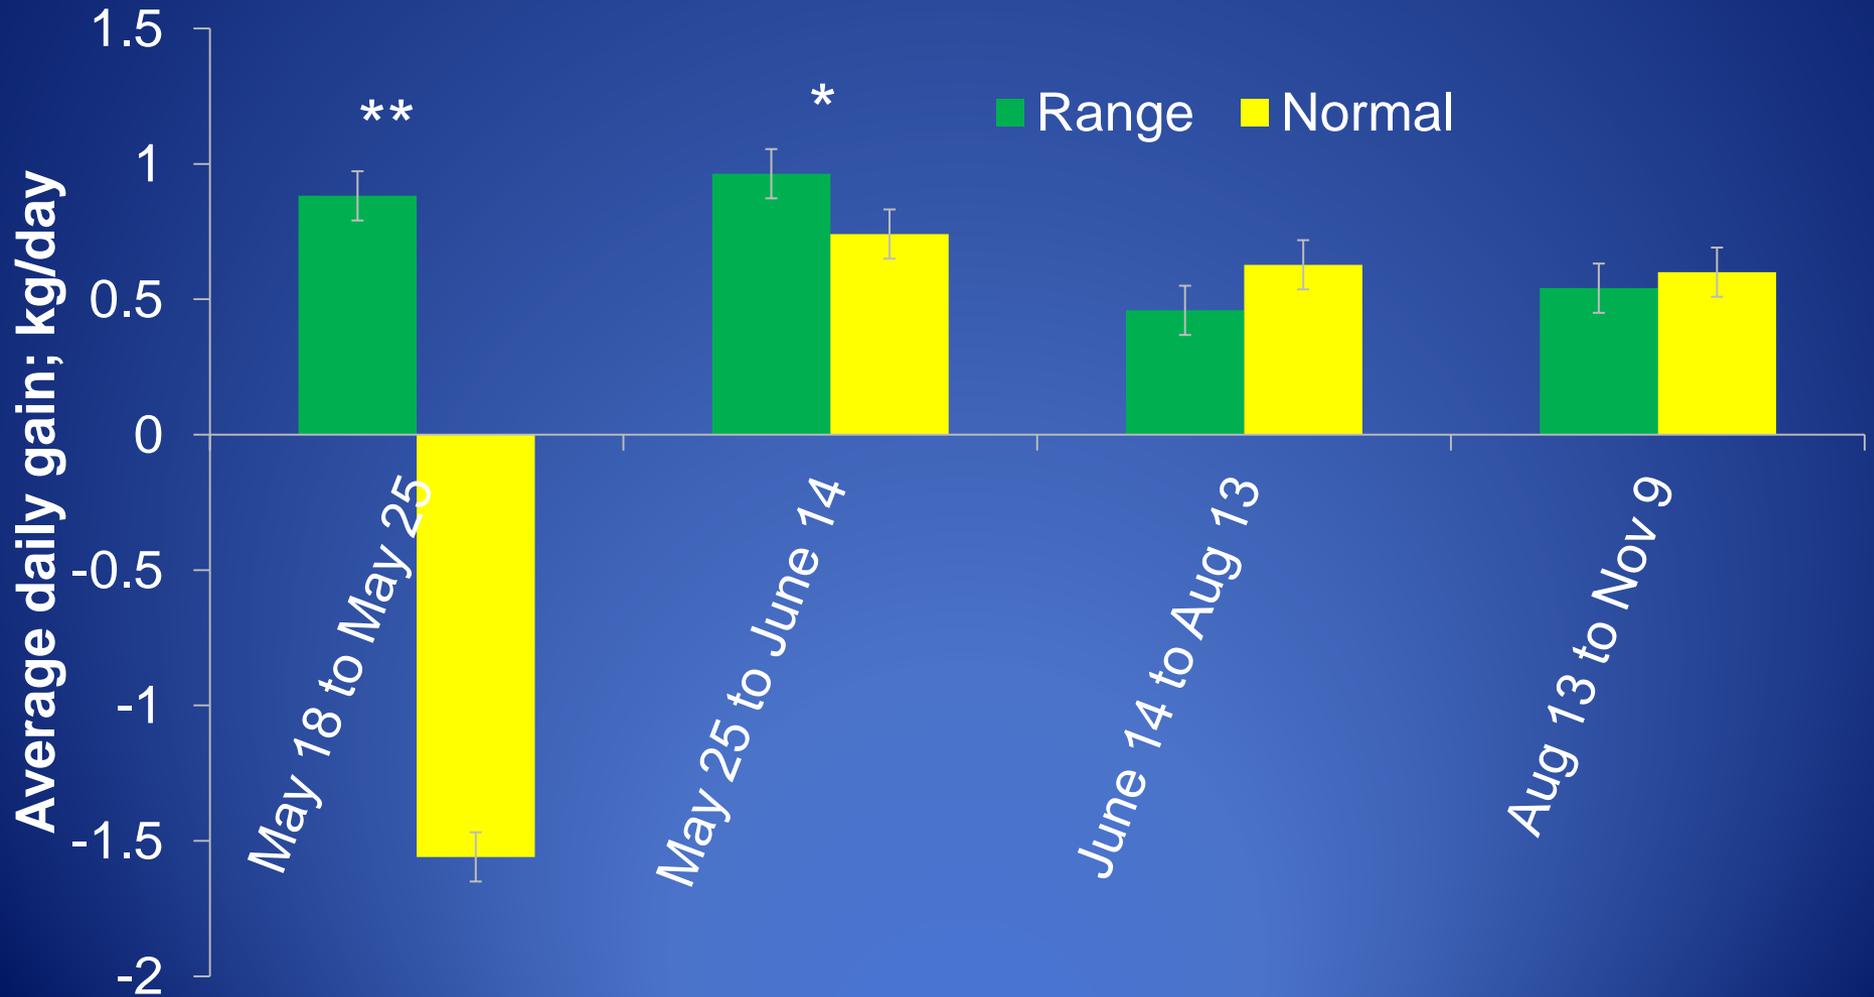

# Heifer weight at breeding

	Low gain (53%)	High Gain (58%)
Begin Wt	469	469
Winter ADG	1.1	1.41
Prebreeding wt	636	689
Prebreeding BCS	5.6 <sup>a</sup>	6.0 <sup>b</sup>
Cycling	74 <sup>a</sup>	85 <sup>b</sup>
Preg 45 d	92	88
Preg 2 <sup>nd</sup> calf	91	91
Preg 3 <sup>rd</sup> calf	94	92
Preg 4 <sup>th</sup> calf	96	96

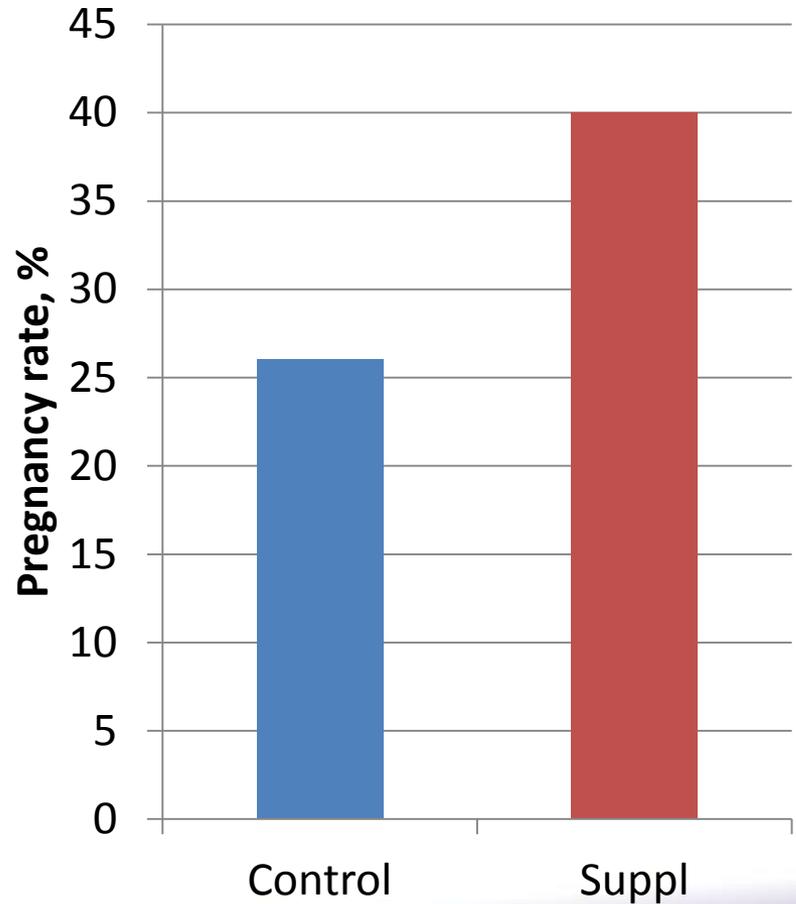

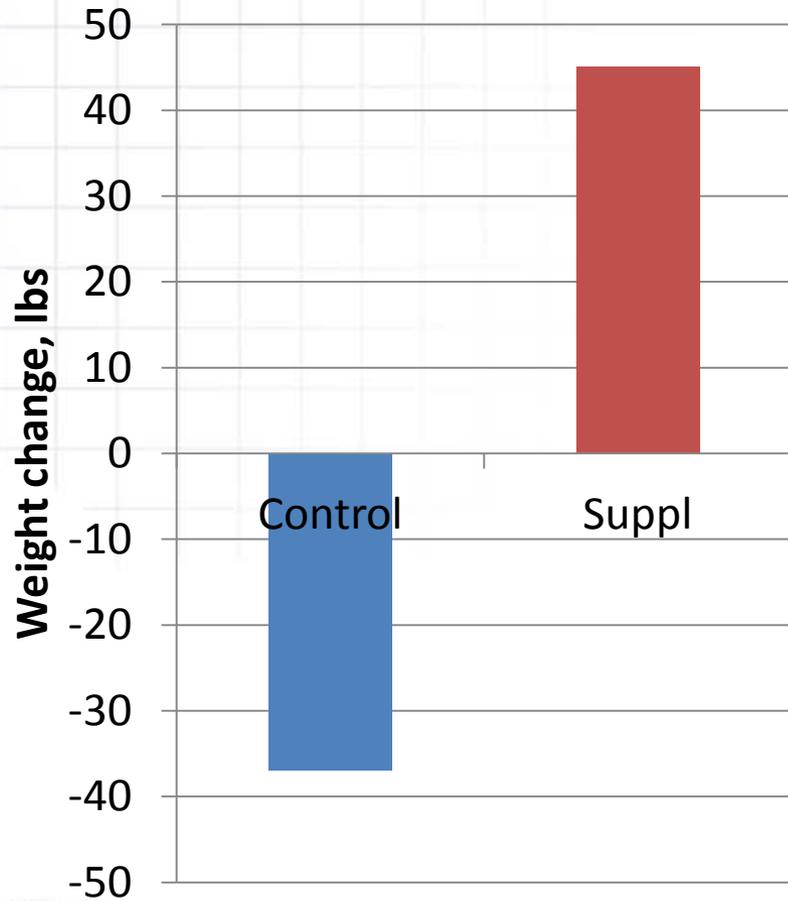

# Forage vs Drylot (normal) Development

# Forage vs Drylot (normal) Development

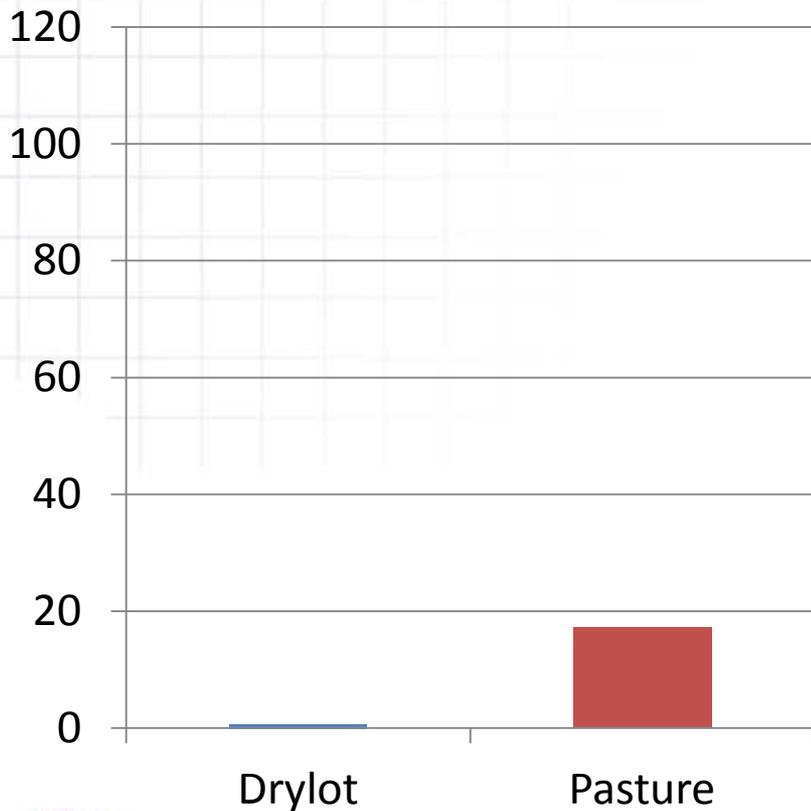

# Effect of 5 lbs DDGs fed 30 days on pasture to heifers after AI

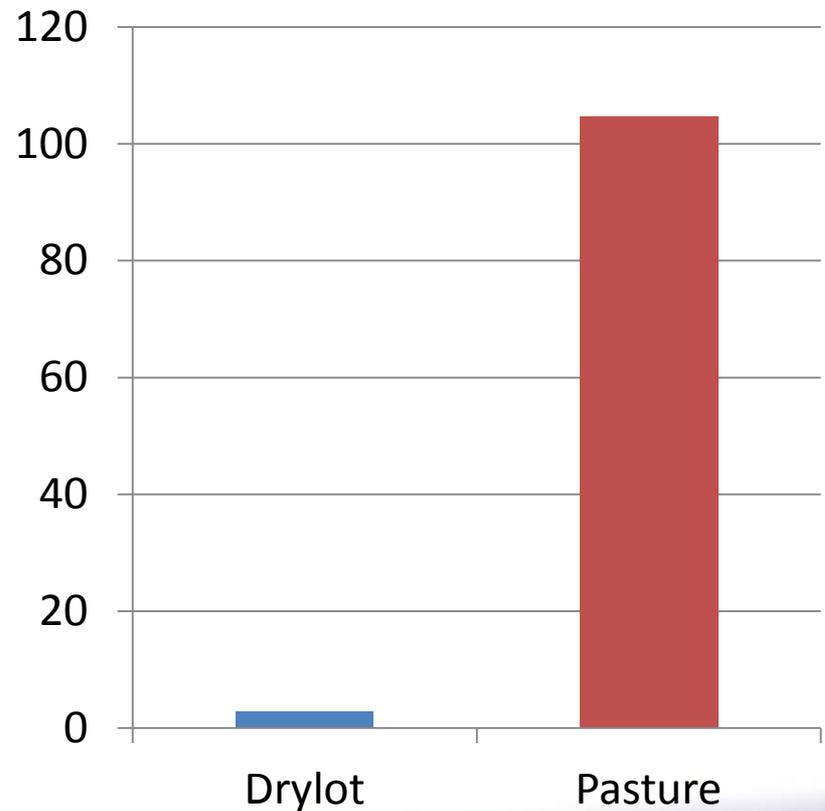

# Effect of grazing prior to synchronization on weight change after AI

## Herd 1, 30 d graze

P=0.07

## Herd 2 (70 d grazing)

P<0.01

Perry et al, 2011

# Effect of grazing prior to synchronization on AI pregnancy success

	Pasture	Drylot
Herd 1	50 % (12/24)	46 % (11/24)
Herd 2	59 % (57/96)	50 % (49/98)
<b>Total</b>	<b>58 % (69/120)</b>	<b>49 % (60/122)</b>

P = 0.17

# Higher pregnancy rates natural service or AI?

- No difference was detected  
6,310 first service natural mating  
13,942 first service AI  
NZ dairy cattle

Williamson et al., 1978

# Results from on-farm field demonstrations of fixed-time AI in Missouri

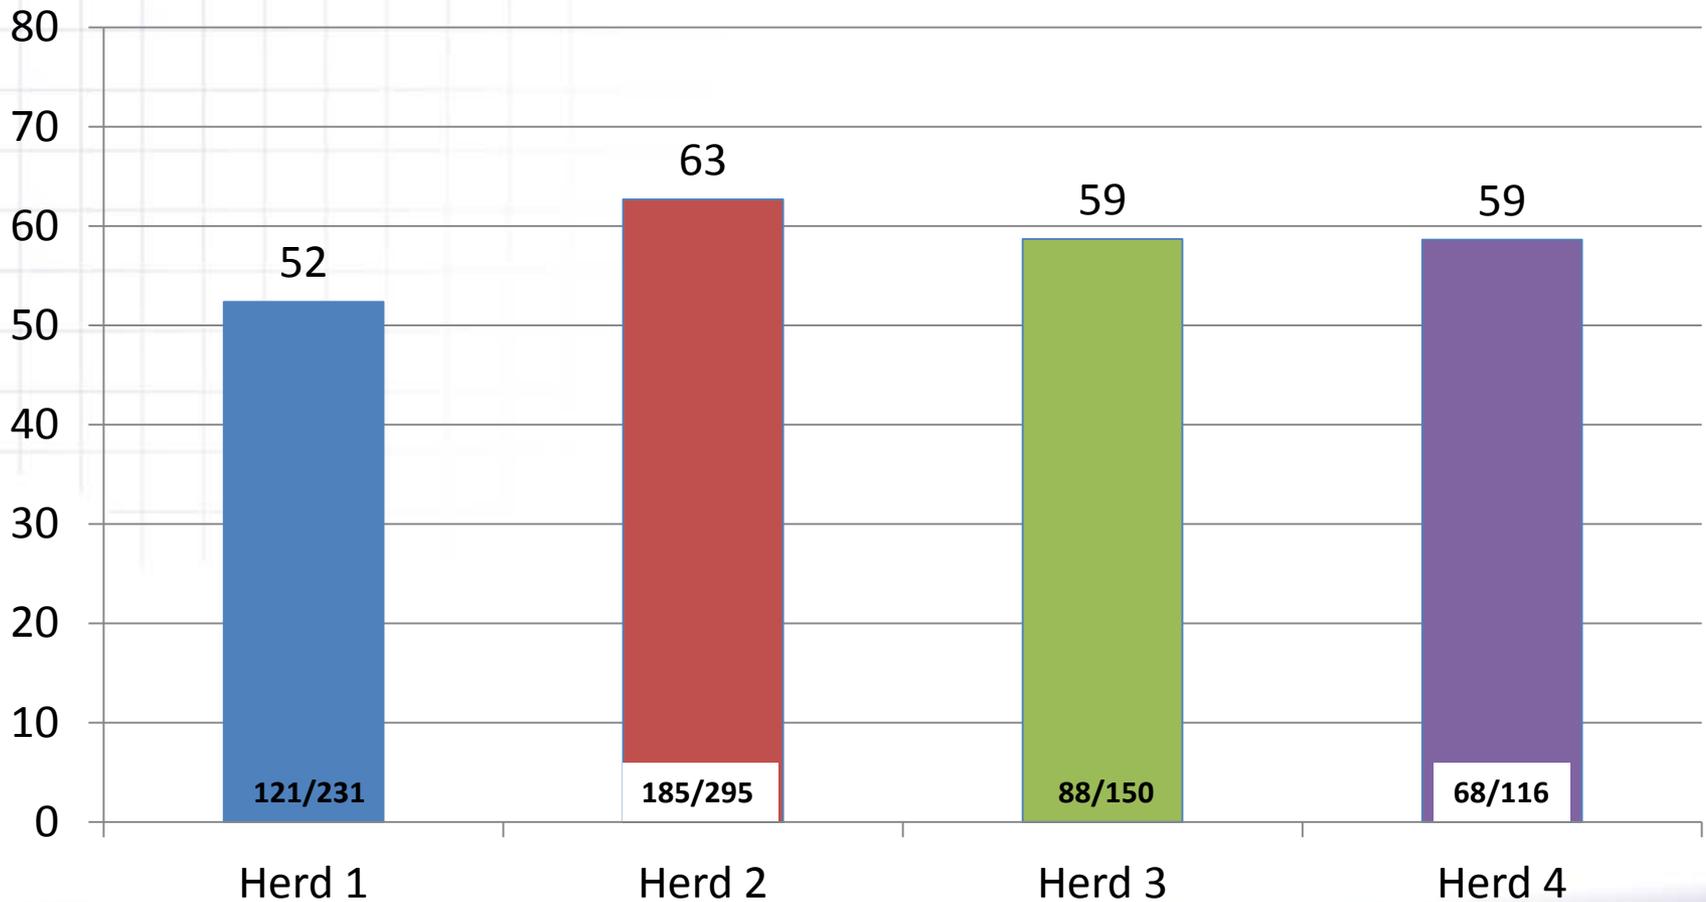

Item	Herds	Cows inseminated	AI pregnancy rate	range
Fixed-time AI	73	7028	4327/7028 (62%)	38 – 86%**

\*three handlings with last being AI

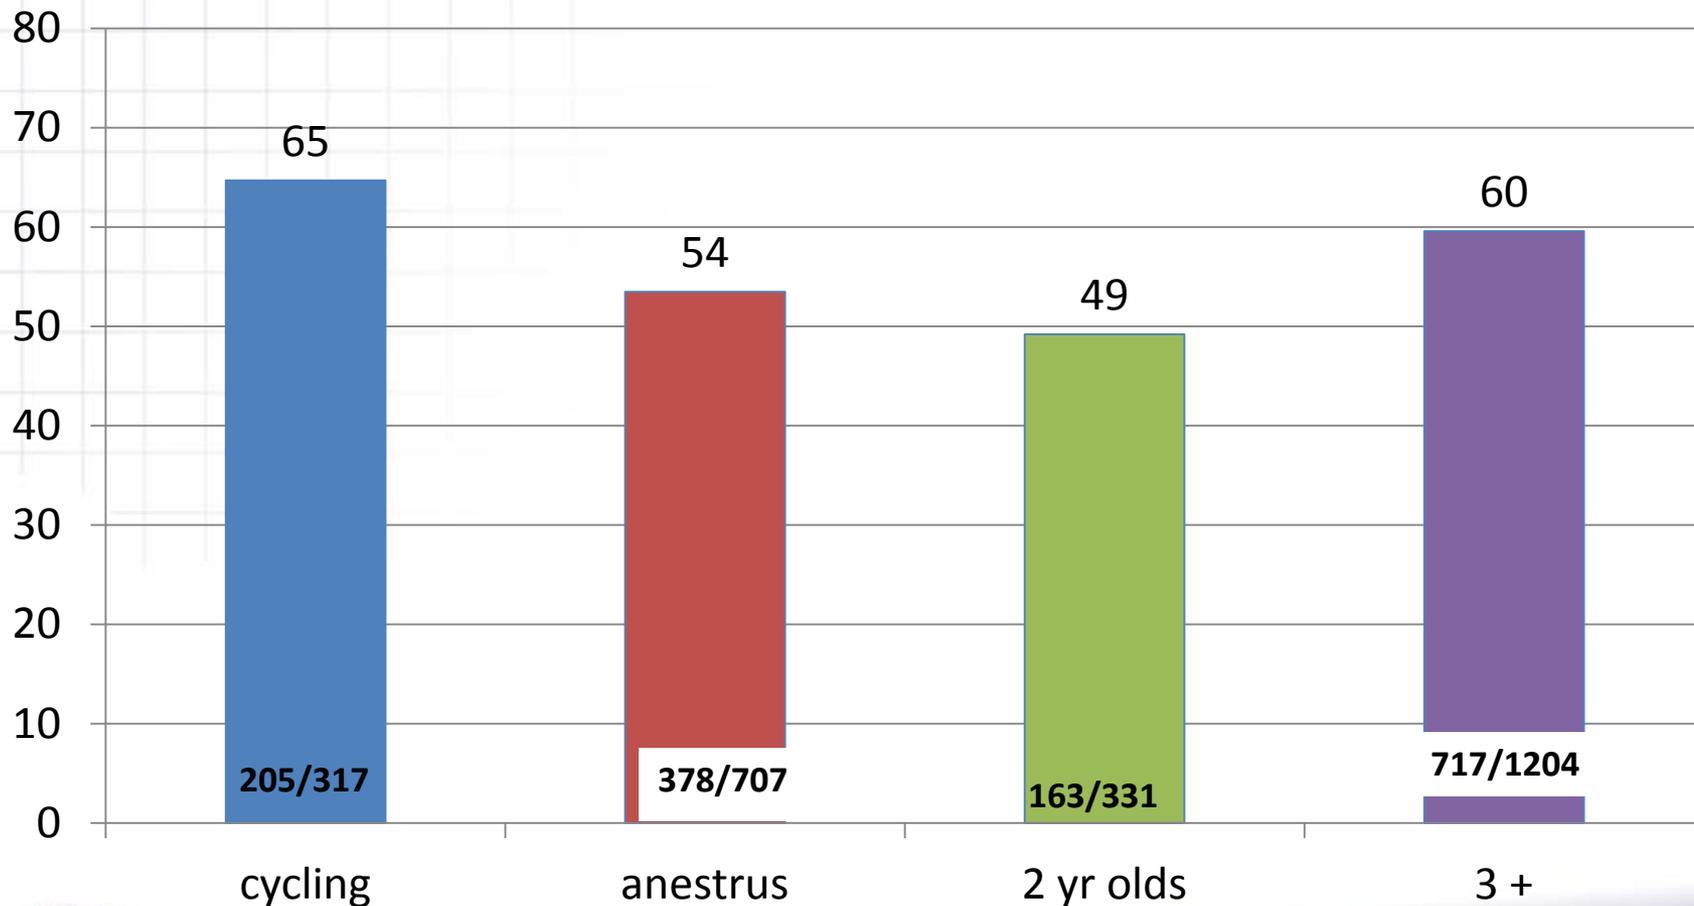

\*\* Only 7 of 73 herds realized pregnancy rates < 50% from fixed-time AI

Patterson et al., 2011

# Fixed-time AI pregnancy rates in heifers

# Pregnancy rate to fixed-time AI, 8 locations, 4 states, 1538 cows

# BEEF HEIFER PROTOCOLS - 2011

## HEAT DETECTION

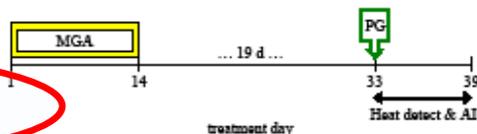

### 1 Shot PG

### 7-day CIDR®-PG

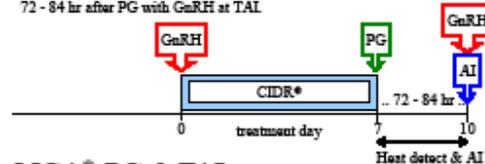

### MGA®-PG

## HEAT DETECT & TIME AI (TAI)

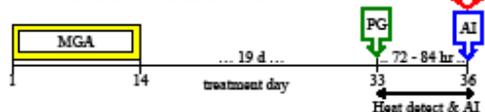

### Select Synch + CIDR® & TAI

Heat detect and AI day 7 to 10 and TAI all non-responders  
72 - 84 hr after PG with GnRH at TAI

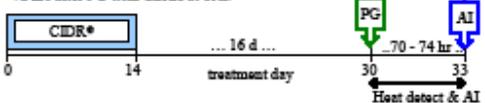

### MGA®-PG & TAI

Heat detect and AI day 33 to 36 and TAI all non-responders  
72 - 84 hrs after PG with GnRH at TAI

### 14-day CIDR®-PG & TAI

Heat detect and AI day 30 to 33 and TAI all non-responders  
72 hrs after PG with GnRH at TAI

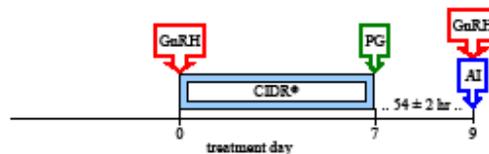

www.beefrepro.info

## FIXED-TIME AI (TAI)\*

### 7-day CO-Synch + CIDR®

Perform TAI at 54 ± 2 hr after PG with GnRH at TAI

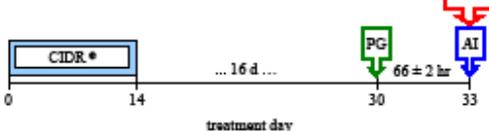

### MGA®-PG

Perform TAI at 72 ± 2 hr after PG with GnRH at TAI

### 14-day CIDR®-PG

Perform TAI at 66 ± 2 hr after PG with GnRH at TAI

## COMPARISON OF PROTOCOLS FOR BEEF HEIFERS

HEAT DETECTION	COST	LABOR
1 Shot PG	Low	High
7-day CIDR®-PG	High	Medium
MGA®-PG	Low	Low/Medium

### HEAT DETECT & TAI

Select Synch + CIDR* (TAI non-responders 72-84 hr after PG)	High	Medium
MGA®-PG (TAI non-responders 72-84 hr after PG)	Medium	Medium
14-day CIDR®-PG (TAI non-responders 70-74 hr after PG)	High	Medium

### FIXED-TIME AI (TAI)

CO-Synch + CIDR* (TAI 54 ± 2 hr after PG with GnRH at TAI)	High	Medium
MGA®-PG (TAI 72 ± 2 hr after PG with GnRH at TAI)	Medium	Medium
14-day CIDR®-PG (TAI 66 ± 2 hr after PG with GnRH at TAI)	High	Medium

\* The times listed for "Fixed-time AI" should be considered as the approximate average time of insemination. This should be based on the number of heifers to inseminate, labor, and facilities.

GnRH Cystorelin®, Factrel®, Fertagyl®, OvaCyst®

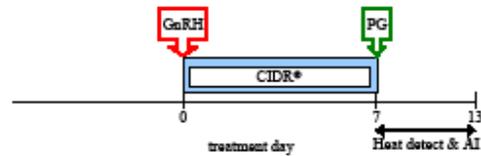

PG estroPLAN®, Estrumate®, In-Synch®, Lutalyse®, ProstaMate®

## HEAT DETECTION

### Select Synch

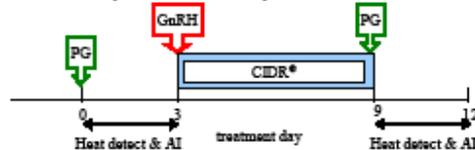

### Select Synch + CIDR®

### PG 6-day CIDR®

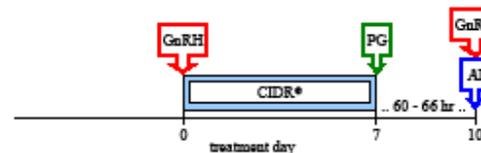

Heat detect and AI days 0 to 3. Administer CIDR to non-responders and heat detect and AI days 9 to 12. Protocol may be used in heifers.

## FIXED-TIME AI (TAI)\*

### 7-day CO-Synch + CIDR®

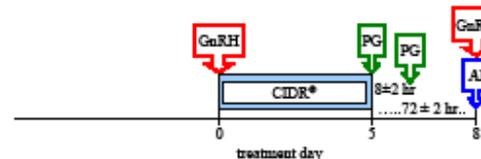

Perform TAI at 60 to 66 hr after PG with GnRH at TAI

### 5-day CO-Synch + CIDR®

Perform TAI at 72 ± 2 hr after 1<sup>st</sup> PG with GnRH at TAI

Two injections of PG 8 ± 2 hr apart are required for this protocol.

## HEAT DETECT & TIME AI (TAI)

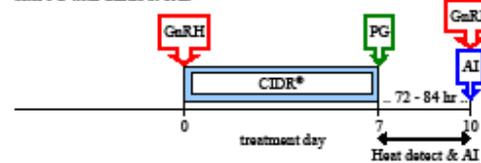

### Select Synch & TAI

Heat detect and AI day 6 to 10 and TAI all non-responders 72 - 84 hr after PG with GnRH at TAI

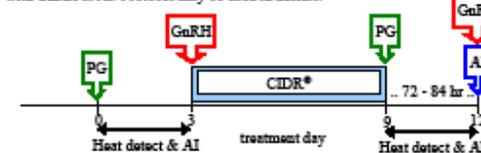

### Select Synch + CIDR® & TAI

Heat detect and AI day 7 to 10 and TAI all non-responders 72 - 84 hr after PG with GnRH at TAI

### PG 6-day CIDR® & TAI

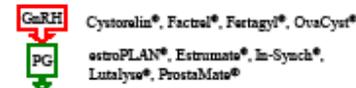

Heat detect & AI days 0 to 3. Administer CIDR to non-responders & heat detect and AI days 9 to 12. TAI non-responders 72 - 84 hr after CIDR removal with GnRH at AI. Protocol may be used in heifers.

## COMPARISON OF PROTOCOLS FOR BEEF COWS

HEAT DETECTION	COST	LABOR
Select Synch	Low	Medium/High
Select Synch + CIDR®	High	Medium
PG 6-day CIDR®	Medium	Medium/High
HEAT DETECT & TAI		
Select Synch (TAI non-responders 72-84 hr after PG)	Low	Medium/High
Select Synch + CIDR® (TAI non-responders 72-84 hr after PG)	High	Medium
PG 6-day CIDR® (TAI non-responders 72-84 hr after PG)	Medium	Medium/High
FIXED-TIME AI (TAI)		
7-day CO-Synch + CIDR® (TAI 60 to 66 hr after PG with GnRH at TAI)	High	Medium
5-day CO-Synch + CIDR® (TAI 72 ± 2 hr after 1 <sup>st</sup> PG with GnRH at TAI)	High	High

\* The times listed for "Fixed-time AI" should be considered as the approximate average time of insemination. This should be based on the number of cows to inseminate, labor, and facilities.

# Products

GnRH

Cystorelin<sup>®</sup>, Factrel<sup>®</sup>, Fertagyl<sup>®</sup>, OvaCyst<sup>®</sup>

PG

Estrumate<sup>®</sup>, In-Synch<sup>®</sup>,  
Lutalyse<sup>®</sup>, ProstaMate<sup>®</sup>, estroPLAN<sup>®</sup>

- Make sure to give the correct injection on the day specified in the protocol
- Within product category, all products are equally effective
- Use at label dose
- Follow BQA guidelines for all injections

# Estrus Synchronization Planner

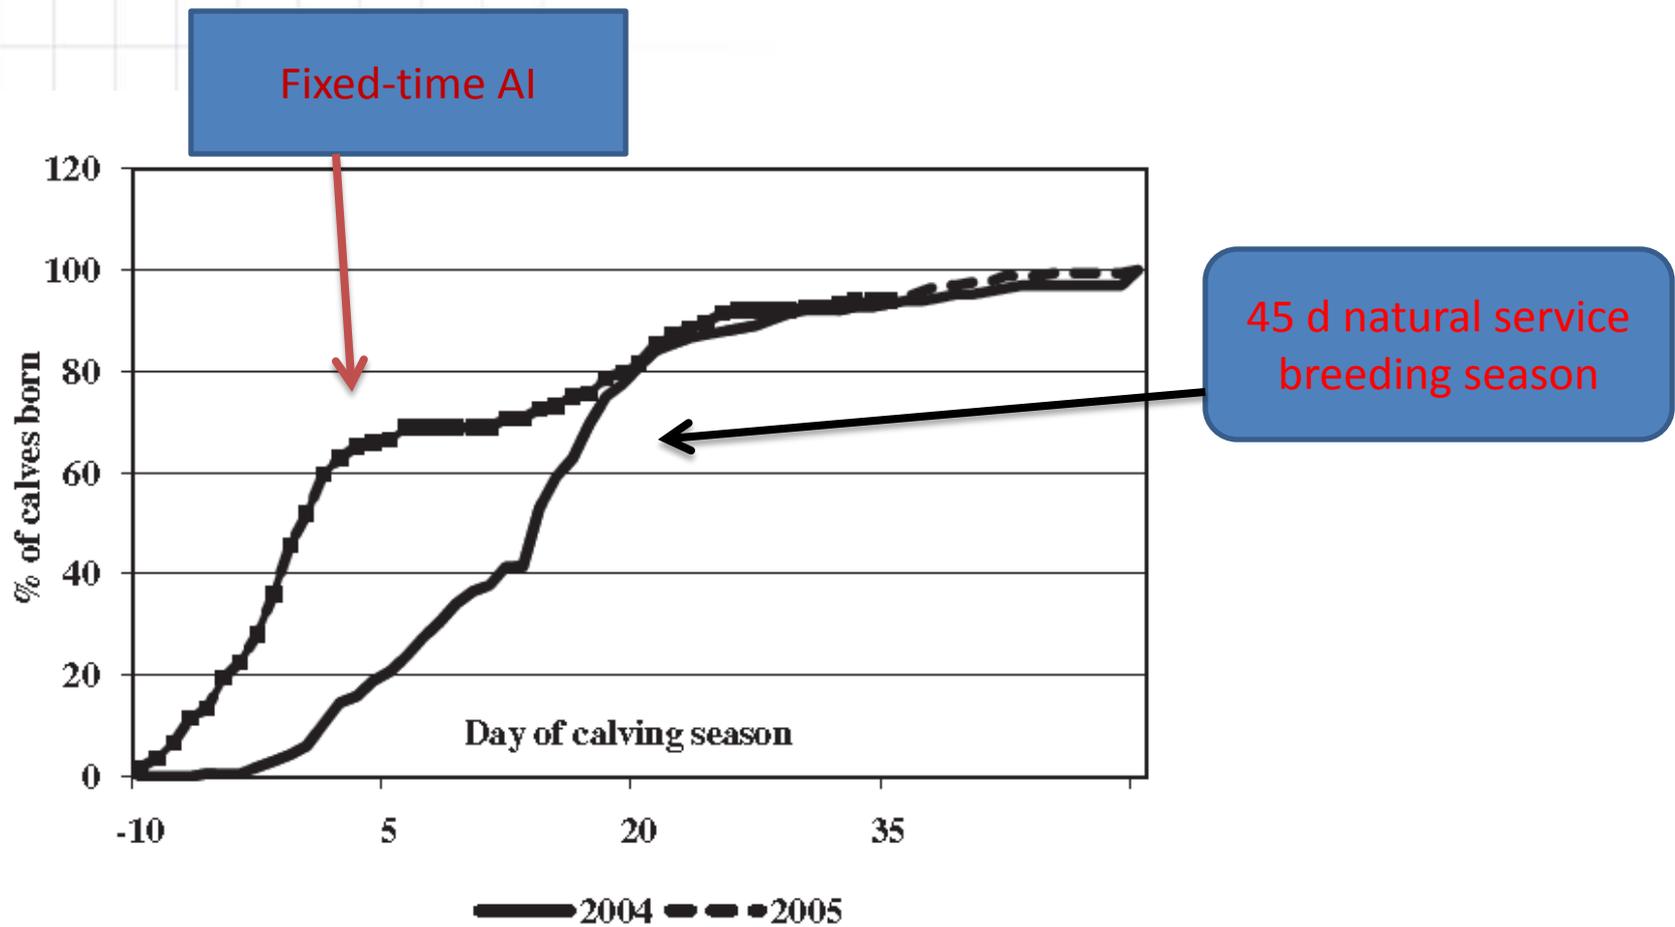

Now free download  
updated 2011 version

## Features

- Recommended systems for cows & heifers
- Select systems by type
  - Heat detect & AI systems
  - Heat detect & cleanup AI systems
  - Fixed-Timed AI Systems
- List of daily activities
- Generates Barn Calendar
- Cost per AI pregnancy
- Support materials

# Proportion calving each day following fixed-time AI
